BEST AVAILABLE IMAGES

Defective images within this document are accurate representations of the original documents submitted by the applicant.

Defects in the images may include (but are not limited to):

- BLACK BORDERS
- TEXT CUT OFF AT TOP, BOTTOM OR SIDES
- FADED TEXT
- ILLEGIBLE TEXT
- SKEWED/SLANTED IMAGES
- COLORED PHOTOS
- BLACK OR VERY BLACK AND WHITE DARK PHOTOS
- GRAY SCALE DOCUMENTS

IMAGES ARE BEST AVAILABLE COPY.

**As rescanning documents *will not* correct images,
please do not report the images to the
Image Problem Mailbox.**

IN THE CLAIMS

The status of each claim is provided below.

1. (Currently Amended) An isolated strain of *Saccharomyces cerevisiae*, which can
contains 1% by weight or more of γ -glutamylcysteine and contains 0.004-0.1% by weight of
glutathione during its logarithmic growth phase, when the strain is cultured in a medium in
which a glutathione synthetase deficient strain of *Saccharomyces cerevisiae* shows a slower
growth rate than a wild strain in a minimal medium.

2. Canceled.

3. Canceled.

4. (Currently Amended) An isolated strain of *Saccharomyces cerevisiae*, wherein
glutathione synthetase encoded by a glutathione synthetase gene on a chromosome has
deletion of a C terminus region from an arginine residue at a position of 370 which produces
glutathione synthetase of which amino acid residues of the 370th position and thereafter are
deleted.

5. (Currently Amended) A yeast Yeast extract produced by culturing the a strain of
Saccharomyces cerevisiae according to claim 1 in a suitable medium and utilizing the
obtained cells extracting or digesting the cells of the cultured strain.

6. (Withdrawn) A method for breeding a strain of *Saccharomyces cerevisiae* containing γ -glutamylcysteine, comprising the steps of:

constructing recombinant strains of *Saccharomyces cerevisiae* in which glutathione synthetase gene is modified by a gene recombination technique and selecting a recombinant strain that contains 0.004-0.1% by weight of glutathione during its logarithmic growth phase when the strain is cultured in a medium in which a glutathione synthetase deficient strain of *Saccharomyces cerevisiae* shows a slower growth rate than a wild strain.

7. Canceled.

8. Canceled.

9. (Currently Amended) A Yeast extract produced by culturing the a strain of *Saccharomyces cerevisiae* according to claim 4 in a ~~suitable~~ medium and ~~utilizing the~~ obtained cells extracting or digesting the cells of the cultured strain.

SUPPORT FOR THE AMENDMENT

Claims 1 and 4 have been amended to specify an “isolated strain.”

Claim 1 has also been amended to specify a “minimal medium.” That amendment is supported by original Claim 3.

The amendment to Claim 4 is also supported by the specification at page 11, lines 18-20.

The amendment to Claims 5 and 9 is supported by the specification at page 16, lines 9-15.

No new matter is believed to have been added to the application by the amendments submitted above.
